

Step-by-step integration

This is another nice example drawn from the Pythontex gallery, see <https://github.com/gpoore/pythontex>.

It shows the step-by-step computations of a simple triple integral.

```
1  xmax = 2; ymax = 3; zmax = 4;
2  xmin = 0; ymin = 0; zmin = 0;
3
4  fun = f[x,y,z];
5
6  mytmp = HoldForm[Integrate[#1, {z, #6, #7},
7                      {y, #4, #5},
8                      {x, #2, #3}]] & @@ {fun, xmin, xmax, ymin, ymax, zmin, zmax}; (* mma(lhs.01,mytmp) *)
9
10 fun = x y + y Sin[z] + Cos[x+y];
11

$$\begin{aligned}
